Sand Classifier SA

Sand Classifier SA separates, dewateres & conveys sand and heavy particles from water. Street sand, filter sand and similar materials can be handled.

The sand/water mix is pumped or fed into the separation tank where sand settles. The screw conveyor then dewateres and conveys the sand. Excess water during pumping flows out over a weir and is led out.

Capacity 5-50l/s

MN has hundreds of international references and has worked with machinery within water treatment for 30 years. We offer the most innovative solutions and the most extensive knowledge on screening equipment. We make all our products ourselves acc to ISO & CE standards. We only use certified materials and welders.
